Colorado Technical University— *BS in CS (3 year completed, on pause)*

2008 - 2012

Computer Science Curriculum. Located in Colorado Springs, CO

PROJECTS

Project Zeal — *Personal Project of Self Improvement*

This is the overarching project that encompasses my ideas and other works in progress. The latest currently worked upon element of this project is my Belthasar bot. It helps run my discord through role

management while also providing a means to play music. This bot is based upon my local machine and runs on node.js. I have more features planned to put into the bot, like a more efficient means of playing music through ffmpeg, Telegram integration and database management. If you would like to experience the bot, feel free to join the discord invite (https://discord.com/invite/DhX5VwzD4y). I do have other projects I have worked on, like a website that has a mostly completed Paypal gateway, ability to upload/download media, ffmpeg file manipulation, a subscription service, Twitter social media integration and more.

Mist.Game — Play2Earn crypto MMORPG

This is a project I originally provided liquidity into starting off. Over time I was able to delve deeper into the project until I was invited by the leads of this project to become one of the community heads for the English side of things. Their main presence is in telegram (https://t.me/MistNFT) and have a discord as well, although invite links are time gated. One can be provided upon request.

ChainLegion — *Play2Earn crypto Web-based game*

This project I was approached about to provide ideas and concepts. This game works through NFTs that are minted and then leveled up. With this leveled up NFT there will be pvp battles and pve battles that can be interacted with on the blockchain. I provide assistance with the main solidity developer when he requests my help to try to give more meat to the functions. They have a telegram as well (https://t.me/ChainLegion)
